Revision History

Rev. No.	Released Date	Description
Rev. A	Oct 16, 2009	❖ First Release
Rev. A1	Oct 22, 2009	❖ Modified "**Getting Started**" - "Clone Function" operation method. ❖ Added "**Appendix**" - "Save Configuration" and "Master Default" System Commands.
Rev. A2	Nov 27, 2009	❖ Modified "**Operation Control**" - "Bluetooth Device Name". ❖ Add "**Appendix**" - "Indications".
Rev. A3	Mar 05, 2010	❖ Modify "**Symbology Reading Control**" - "UPC-A & UPC-E Setting" ❖ Modified "**Serial Interface Control**" – Renamed "Time Out Control" to "Serial Response Time-out". ❖ Modified "**Operation Control**" – "Operation Mode" - Renamed "Presentation Scanning Mode" to "Presentation Control". ❖ Modified "**Operation Control**" – "Rename "Auto Power Off Duration" to "Light Source On Time". ❖ Modified "**Operation Control**" – "Good Read Duration" ❖ Modified "**Operation Control**" – "Rename "Presentation Scanning Auto-sense" to "Presentation Auto-sense". ❖ Added "**Operation Control**" – "Presentation Sensitivity"
Rev. A4	Apr 27, 2010	❖ Modified "**Serial Interface Control**" – "Baud Rate(BPS)" ❖ Modified "**Operation Control**" – " Hands Free Time-out"
Rev. A5	Jun 28, 2010	❖ Added "**Symbology Reading Control**" - "UPC/EAN Security Level".
Rev. A5	Jun 28, 2010	❖ Added "**Operation Control**" – " Time Delay to Low Power Trigger" (Renamed to "Time Delay to Low Power Standby Mode" on Rev.C7) ❖ Added "**Operation Control**" – "Good Read Indicator". ❖ Modified "**Operation Control**" – " Scan Rate Control" – Added "Scan Voting"
Rev. A6	Sep 20, 2010	❖ Modify "**Symbology Reading Control**" - Renamed "Scan Voting" to "Supplement Scan Voting" ❖ Modify "**Symbology Reading Control**" – "EAN Setting" ❖ Modify " **Keyboard Interface Control**" – " Keyboard Layout (Language) Setting"

Revision History

Rev. No.	Released Date	Description
Rev. A6	Sep 20, 2010	❖ Modified "**Operation Control**" – " Scan rate Control" ❖ Modified "**Operation Control**" – " Batch Data Quantity Output Format" (Renamed to "Stored Data Output format" on Rev. C7)
Rev. A7	Nov 10, 2010	❖ Modified "**Serial Interface Control**" – "Baud Rate(BPS)"
Rev. A8	Jan 2, 2011	❖ Modified "**Operation Control**" – "Buzzer Tone Adjust"
Rev. A9	Mar 04, 2011	❖ Modified "**Serial Interface Control**" – "Baud Rate(BPS)"
Rev. B1	Mar 22, 2011	❖ Modify "**Symbology Reading Control**" – "Code 39 Setting" ❖ Modified "**Serial Interface Control**" – "Protocol, ACK/NAK Setting"; Added "ACK/NAK Transmission Indication".(Renamed to "ACK Indication" on Rev. B2) ❖ Added " **Appendix**" - "Numeric Bar Codes ".and "Connecting Apple iOS Devices Quick Sets" (Removed and modified to "Toggle between Barcode scanning and On-screen keyboard of mobile devices" on Rev.C7)
Rev. B2	Jul 22, 2011	❖ Modify "**Symbology Reading Control**" – "User Defined symbol" ❖ Modified "**Serial Interface Control**" – "Protocol, ACK/NAK Setting"; Renamed "ACK/NAK Transmission Indication" to "ACK Indication" ❖ Modified "**Serial Interface Control**" – " Serial response time -out" ❖ Added "**Operation Control**" – "Laser Aiming Control" ❖ Modified "**Condensed DataWizard**" – "Select a Br Code Symbology"
Rev. B3	Nov 04, 2011	❖ Modified "**Getting Started**" – " Paging/ Reset button" ❖ Modified "**Symbology Reading Control**" – " Codabar/NW-7 Setting"
Rev. B4	Jan 03, 2012	❖ Modified "**Wand/Laser Emulation Control**" – " Code 39/Code 128 Emulation"
Rev. B5	Mar 05, 2012	❖ Added "**Condensed DataWizard**" – "1D Barcode Forward-reading Indication", "1D Barcode Backward-reading Indication", and "1D Barcode Direction Indication Transmission"

Wireless FuzzyScan Reference Manual

Revision History

Rev. No.	Released Date	Description
Rev. B6	Jul 25, 2012	❖ Modified "**Host Interface Selection**" ❖ Modified "**Symbology Reading Control**" – " Code 128 Setting" ❖ Modified "**Wand/Laser Emulation Control**" – " Code 39/Code 128 Emulation" ❖ Added "**Operation Control**" – "LED illumination Control" and "LED Illumination Delay"
Rev. B7	Aug 20, 2013	❖ Modified "**Symbology Reading Control**" – "Readable Bar Code Setting" section" ❖ Modified " **Appendix**" - "Symbology ID Table"
Rev. C1	Jan 15, 2014	❖ Supported 2D Functions ❖ Modified "**Getting Started**" – " Preparation before Using", " Use FuzzyScan in HID Mode", and "Batch Scanning" ❖ Added "**Getting Started**" – "Sleep Mode" and "Power Off"
	Jan 23, 2014	❖ Modified "**Operation Control**" – "Presentation Sensitivity"
Rev. C2	May 08, 2014	❖ Support 1D Pocket Scanner ❖ Added "**Host Interface Selection**" - "USB EFT Terminal Mode" ❖ Added "**Appendix**" - "USB HID Legacy Mode" Host Interface and "Abort" Option Codes Quick Set Command
Rev. C3	May 09, 2014	❖ Added "**Getting Started**" – "Clear All Scanned Data" Command.
Rev. C4	Feb. 06, 2015	❖ Added "**Symbology Reading Control**" – " MaxiCode Setting"
Rev. C5	Mar. 09, 2015	❖ Added "**Getting Started**" – "Paging Function" ❖ Added "**Operation Control**" – " Radio Connection Beeps", "HID Mode Transmit Delay" and "Link Quality Control"
Rev. C6	Jun. 03, 2015	❖ Modified "**Operation Control**" – " Good Read Duration" ❖ Modified " **Appendix**" - " Uninstall" Quick Set
Rev. C7	Sep. 09, 2015	❖ Supported 2D Pocket Scanner

Wireless FuzzyScan Reference Manual

Revision History

Rev. No.	Released Date	Description
Rev. C7	Sep. 09, 2015	❖ Added "**Getting Started**" – " Using the Function Keys of Pocket Scanner", " Enter Bluetooth Discoverable Mode", "How to Delete Last Scanned Data", "Toggle between Barcode Scanning and On-screen Keyboard input", " Check Battery Status" and "Battery Status Indication" ❖ Modified "**Getting Started**" – " Power Off" and "How to Transmit Stored Data" ❖ Added "**Operation Control**" – "Buzzer Volume", "Timestamp Functions", 2D "Stored Data Output Format", "Radio Link Mode for Discoverable Mode" and "Low Power Stand-by mode Link Indication" ❖ Renamed "**Operation Control**" – "Time Delay Low Power Trigger" to "Time Delay to Low Power Standby Mode" ❖ Removed "**Operation Control**" – "Link Supervision Time Out" ❖ Renamed "**Operation Control**" – "Sleep Time-out Control" to "Radio-off Time-out Control"; ❖ Modified "**Operation Control**" – "HID Mode Transmit Delay". "Good Read Duration" and "Time Delay to Low Power Standby Mode" ❖ Modified "**Operation Control**" – "Radio-off Time-out Control, Power Off Time-out Control" ❖ Renamed "**Operation Control**" – "Batch Data Quantity Output Format" to "Stored Data Output Format" ❖ Renamed "**Operation Control**" – "Bluetooth Power Saving Mode" to "Bluetooth Sniff Control"; Enable Bluetooth Sniff Control. ❖ Modified "**Operation Control**" – "Link Quality Control" ❖ Added "**Operation Control**" – "On-screen Keyboard Control" ❖ Modified "**Appendix**" – "Toggle between Barcode Scanning and On-screen Keyboard input" ❖ Removed "**Appendix**" – "Sleep" system command
Rev. C8	Dec. 23, 2015	❖ Updated "Revision History" ❖ Modified "**Getting Started**" – " Toggle between Barcode Scanning and On-screen Keyboard input" ❖ Added "**Operation Control**" – available firmware information for optimized Bluetooth operation behaviors.
Rev. C9	Mar. 17, 2016	❖ Added "**Getting Started**" -A670BT series scanner ❖ Modified "**Operation Control**" – available firmware information for optimized Bluetooth operation behaviors.

Revision History

Rev. No.	Released Date	Description
Rev. C10	May. 31, 2016	❖ Modified "**Operation Control**" – "Timestamp Functions"
Rev. C11	Aug. 04, 2016	❖ Added "**Symbology Reading Control**" – "Small DM Code Reading"
Rev. C12	Oct. 07, 2016	❖ Modified "**Appendix**" – " Keyboard Function Code Table"
Rev. C13	Mar. 9, 2017	❖ Modified "**Appendix**" – "Scanner Indication" ❖ Modified "**Operation Control**" – " Buzzer Tone Adjust " ❖ Moved "Dollar Sign control" from "**Operation Control**" to **"Keyboard Interface Control"**.
Rev. C14	Aug. 3, 2017	❖ Added "**Getting Started**" –"Validation Scanning" ❖ Modified "**Getting Started**" – " Using the Function Keys of Pocket Scanner " ❖ Added "**Operation Control**" – "Validation Scanning" ❖ Added "**Operation Control**" – "FN2 Function Mode"
Rev. C15	March. 02, 2018	❖ Added new released model "A780BT" and "A680BT" ❖ Modified "**Symbology Reading Control**" –"Readable Symbology Setting" – "Popular 1D" ❖ Modified "**Getting Familiar with Your FuzzyScan**" - A780BT and A680BT series scanner ❖ Modified "**Preparation before Using**" – "Charging the Battery"
Rev. C16	Sep. 20, 2018	❖ Added "**Operation Control**" - "Motion Control" ❖ Modified the description of " **Symbology Reading Control**" – " UPC/EAN Security Level" ❖ Added information on **Code Pages** ❖ Modified "**Radio-off Time-out - Disconnect State**" parameter information ❖ Modified notes on **Unique Barcode Reporting**
Rev. C17	Nov. 22, 2018	❖ Improved "Symbology Reading Control" – "Code 128 Setting ISBT" - ISBT Concatenation settings
Rev. C18	March. 21, 2019	❖ Modified "**Symbology Reading Control**" – "QR Code Setting" – "Auto detect QR Code Inverse Reading" ❖ Modified "**Operation Control**" – "Motion Control". Redefined "Motion Control" as "Scene Mode". ❖ Removed "**Operation Control**" – "Bluetooth Sniff Control"

Revision History

Rev. No.	Released Date	Description
Rev. C19	June. 11, 2019	❖ Added "**Getting Started**" – "Preparation before Use – Smart Dongle" ❖ Added "**Getting Started**" – "Pairing Bluetooth Imager with Dongle"

Warranty

Cino warrants its products against defects in workmanship and materials from the date of shipment, provided that the product is operated under normal and proper conditions. The warranty provisions and durations are furnished by different warranty programs. The above warranty does not apply to any product which has been (i) misused; (ii) damaged by accident or negligence; (iii) modified or altered by the purchaser or other party; (iv) repaired or tampered by unauthorized representatives; (v) operated or stored beyond the specified operational and environmental parameters; (vi) applied software, accessories or parts are not supplied by Cino; (vii) damaged by circumstances out of Cino's control, such as, but not limited to, lightning or fluctuation in electrical power. Any defective product must follow the warranty program and RMA procedures to return Cino for inspection.

GETTING STARTED

Getting Familiar with Your FuzzyScan Scanners

Thank you for choosing Cino FuzzyScan Bluetooth Cordless Image Scanner. Powered by the combination of cutting-edge FuzzyScan Imaging Technology and Bluetooth wireless technology, it not only provides outstanding reading performance, but also delivers the convenience and freedom of mobility. It's ideal for a broad range of applications to unleash your productivity with ease. This document provides a quick reference for installation and operation. The complete documentation is available at **www.cino.com.tw**.

Using the Function Keys of Pocket Scanner:

Function Keys	Functions	Actions
Left Key	Check battery status	Short press the key
	Transmit stored batch data	Long press the key
Right Key	Power off the scanner	Long press the key
Function Key 1	On-screen keyboard toggle	Short press the key
	Enter Bluetooth discoverable mode	Long press the key
Function Key 2	Delete last scanned data (batch scanning)	Short press the key
	Enter batch scanning (inventory mode)	Long press the key
	Register Master Data (Validation Scanning)	Short press the key
	Enter Validation Scanning	Long Press the key

Short Press: Press the key for less than 1 second.
Long Press: Press and hold the key for more than 3 seconds.

The Batch Scanning (Inventory Mode) is set as the default function mode, if you want to use the Function Key to carry pout Validation Scanning, you have to change the "FN2 Function Mode" setting.

Wireless FuzzyScan Reference Manual

Preparation before Use – Gun type Scanners

Install the Battery
① Ensure the battery contacts of the battery pack are facing the charging contacts inside the battery cavity.

② Slide the battery pack into the battery cavity until hearing a click sound before locking it with the end cap. The scanner will give 4 beeps when the battery pack is installed properly if the battery pack still has power.

③ Secure the end cap with the screw provided.

Charging the Battery
① Choose an appropriate plug and slot it into the power adapter cavity until it is locked. Then plug the AC power plug into the AC wall socket.

② Plug the DC power cord of power supply unit into the DC Jack of the cradle. The smart cradle emits the power-on beeps and the central indicator gives **one blue blink**. If you use the charging cradle, the central power indicator turns **steady blue**.

③ Place the scanner on the cradle. The status indicator of scanner turns **steady red** if the battery is not fully charged. When the battery is fully charged, the status indicator of scanner turns **steady green.**

Please charge the new battery pack for 8 hours before its first use.

Use USB Bus Power
① If **USB 3.0** is available in your host device, both battery charging and regular operation can be supported by the USB Bus Power without using external power supply.

② If only **USB 2.0** is available in your host device, we recommend using external power supply as power source, because the power supplied from USB2.0 is not enough to support both battery charging and regular operation simultaneously.

③ If you want to use this feature, please slide the USB bus power switch to "**ON**". Then connect the cradle to the host device via USB cable.

Preparation before Use – Pocket Scanners

Install the Battery
1 Take off the battery cover from the scanner by removing two blue tapes.

2 Ensure the battery contacts of the battery pack are facing the charging contacts inside the battery cavity. Then click the battery pack into the battery cavity carefully.

3 Place the battery cover in the right orientation onto the back of the scanner. Screw in and tighten the four shipped M2 screws in sequence by a small screw-driver in the clockwise direction.

Charging the Battery via Power Supply Unit
1 Choose the right plug and slot it into the power supply unit cavity until a "click" is heard. Then plug the power supply unit into the wall outlet

2 Please make sure the USB bus power switch is in "OFF" position.

3 Plug the DC connector of the power supply unit into the DC Jack of the cradle. The cradle emits four beeps. For the Smart cradle, the central indicator **blinks blue once** and side indicators **lights red**. For the charging cradle, the central indicator lights **blue**.

4 Place the scanner onto the cradle. When the battery is fully charged, the status indicator of scanner will light **green**.

Charge the Battery via USB 3.0 Port
The scanner can also be charged via the USB 3.0 port without the power supply unit. You can connect the cradle to USB 3.0 port of host device by a USB cable, then slide the USB bus power switch to "ON". After that, place the scanner onto the cradle.

The scanner can also be charged via its micro USB port by connecting the micro USB cable to USB 3.0 port of host device or the commercial USB power adapter connected to the wall socket.

Wireless FuzzyScan Reference Manual

Preparation before Use – Smart Dongle
1 Remove the dongle's cap

2 Plug the dongle into your host device's USB port.

3 Supply power to the dongle by turning on your host device. The power/pairing indicator will flash blue once and its status indicator will emit alternating red-green flashes ("unpaired state") when powered on.

Wireless FuzzyScan Reference Manual

Choose Your Radio Link Mode

The FuzzyScan Bluetooth image scanner provides several radio link modes to communicate with most host devices. When the Bluetooth-enabled host device is not available, it can work with the smart cradle in PAIR mode (peer-to-peer connection) or PICO mode (multiple connections) to provide a **plug-and-play** cordless migration of your existing non-Bluetooth-enabled devices. Moreover, you are also able to use the scanner to work with Bluetooth-enabled host devices via SPP mode or HID mode.

When the radio link is disconnected, the scanner is capable of reconnecting the radio link automatically when it returns to the communication coverage. But please note that this feature is not available in SPP slave mode. If you would like to change the radio link mode, please scan the "**Uninstall**" command to reset the scanner to uninstall state.

PAIR Mode

If the Bluetooth device is not available in your existing system, PAIR mode is the simplest plug-and-play solution. In this mode, a smart cradle can only work with one scanner. The smart cradle not only provides the Bluetooth radio link with the scanner, but also offers the legacy cabled interfaces to the host device, including USB HID, USB COM and RS232 Serial.

PICO Mode

For the requirement of multiple connections, up to 7 scanners can be connected to one smart cradle concurrently. If you would like to un-pair all scanners paired with the smart cradle, please press and hold the paging/reset button of the smart cradle for more than 5 seconds. If you just want to un-pair part of the paired scanners, please take those paired scanners to scan the "Uninstall" command one by one.

HID Mode

Through the most useful HID service, the scanner can work as a **Bluetooth Keyboard**. In this mode, the scanner will be discoverable by the radio connection request issued by the remote host device. For some cases, you may be requested to enter the Passkey (PIN) to establish the Bluetooth connection for security purpose.

SPP Master/Slave Mode

Through the standard SPP service, the scanner can work as a **Bluetooth Serial Device**. In SPP master mode, the scanner initiates the radio connection request to the remote slave device. In SPP slave mode, the scanner will be discoverable by the radio connection request issued by the remote host device.

Using Scanner in PAIR Mode

1 Ensure the battery is fully charged. You may refer to the section of **Preparations before Using** for details.

2 Please choose your desired interface cable, then plug it into the host interface port of the smart cradle and connect it to the host device.

USB   RS232
3 Turn on the power of your host device.

4 Power on or wake up the scanner by pressing the **Trigger** key if the scanner is power-off.

5 This scanner is pre-paired with the shipped smart cradle, so you will see the link indicators of scanner **blink blue per 2.5 seconds**, and the central indicator of the smart cradle **light blue**. If the scanner and smart cradle are not paired, the status indicator of scanner and the side indicators of smart cradle **blink red and green alternatively** (in "**Uninstall**" state). Please follow step 6 to establish the connection.

6 Scan "PAIR mode" command. The status indicator of scanner will turn steady red immediately.

Uninstall   **PAIR Mode**

Place the scanner on the smart cradle, then you will hear one short beep to indicate the pairing process is activated. The scanner will emit continuous short clicks and the link indicator of scanner will flash blue quickly during the pairing process. When you hear 4 beeps in ascending tone, the pairing process is completed. You will see that the link indicator of scanner gives **1 blue blink per 2.5 seconds** and the central indicator of the smart cradle **lights blue**.

If the scanner pairing process failed or it's not placed on the smart cradle within 20 seconds, you will hear 2 "Di-do Di-do" beeps to warn the failure of pairing, the scanner will return to uninstall state automatically.

7 Scan the corresponding host interface quick set command to complete the installation.

The default host interface of smart cradle is preset to **USB HID**. If you want to set the host interface to **USB COM**, you have to install the USB virtual COM driver into your host device before using the scanner. Please visit CINO website to download the driver.

Using Scanner in PICO Mode

1 Ensure the battery is fully charged and choose your desired interface cable, then plug it into the host interface port of the smart cradle and connect it to the host device.

USB   RS232
2 Turn on the power of your host device.

3 Ensure the side indicators of the smart cradle **blink red and green alternatively** (in "**Uninstall**" state). If the smart cradle is paired with other scanners, please press and hold the paging/reset button for **more than 5 seconds** to un-pair all paired scanners. Then the smart cradle will return to uninstall state automatically.

4 Prepare the scanners you desire to pair with smart cradle. Power or wake up the scanner by pressing the **Trigger** key if the scanner is power-off. Ensure the status indicator of each scanner **blinks red and green alternatively** (in "**Uninstall**" state). If the scanner is not in uninstall state, please scan the "Uninstall" command to un-pair the scanner, then scan the "**PICO mode**" command, and the status indicator of scanner will light red.

Uninstall   **PICO Mode**

Place the scanner onto the smart cradle, then you will hear one short beep to indicate the pairing process is activated. The scanner will emit continuous short clicks and the link indicator of scanner will flash blue quickly during the pairing process. When you hear 4 beeps in ascending tone, the pairing process is completed. You will see that the link indicator of scanner **blinks blue once per 2.5 seconds**; the central indicator of the smart cradle **lights blue** and its side indicators **light green**.

If the scanner pairing process failed or it's not placed on the smart cradle within 20 seconds, you will hear 2 "Di-do Di-do" beeps to warn the failure of pairing, the scanner will return to uninstall state automatically.

5 Please scan the corresponding host interface quick set command to complete the installation. Then repeat the same procedure to pair other scanners with the smart cradle.

For user's convenience, the smart cradle will automatically assign the ID numbers to each scanner. Please scan the **System Information** command to check the assigned ID number of each scanner.

Wireless FuzzyScan Reference Manual

Clone Function

For the user's convenience, the clone function will help you to clone the host interface related parameters (please refer to following table for details) from one of the paired scanners to the rest of paired scanners under PICO mode. You can use one of the paired scanners to set the host interface related parameters first and then scan "Save Configuration" command. After that, please take the other paired scanners to scan "Clone" command one by one to clone the host interface related parameters.

📝 Please ensure to keep those paired scanners in connected status when you use the **Clone** function. Because the host interface related parameters can't be cloned to the paired scanner in disconnected status.

Save Configuration   **Clone**

The below host interface related parameters will be impacted by clone function:

Data Transmission Parameter	Serial Interface Control
Field Delimiter	Handshaking Protocol
Data Transmission Format	Intermessage Delay
Host Interface Control	Interfunction Delay
Host interface Selection	Intercharacter Delay
Keyboard Interface Control	Baud Rate
Keyboard Layout	Data Frame
Intermessage Delay	Time Out Control
Interfunction Delay	**Wand Emulation Control**
Intercharacter Delay	Output Polarity
Caps Lock Control	Initial Signal State
Caps Lock Release Control	Margin Time
Function Key Emulation	Module Time
Key Pad Emulation	Narrow/Wide Ratio
Upper/Lower Case	Code39 Emulation

Wireless FuzzyScan Reference Manual

Using Scanner in HID Mode

1 Ensure the battery is fully charged. Power on the scanner by pressing the Trigger key within radio range if the scanner is power-off, and ensure the status indicator of scanner gives **alternative red and green blinks** (in "**Uninstall**" state). If the scanner is not in uninstall state, please scan the "Uninstall" command first.

Uninstall

If your remote host is equipped with latest Bluetooth drivers, or it's an iOS or Android device, you are recommended to use "**HID Mode**" for quick pairing. If necessary, you may use "**HID Mode with Passkey**" to establish a more secure connection, If you frequently experienced the problem in using HID mode, please try " **HID Legacy Mode**" instead.

HID Mode

HID Legacy Mode

HID Mode with Passkey

Once you scan one of above commands, the link indicator of scanner will **blink blue 3 times per 2 seconds** during searching process. You have to execute the Bluetooth Discovery procedure to find available Bluetooth device, then select "F(L/A)xxxBT-xxxx" or "PF(L/A)xxxBT-xxx".

2 If you use "**HID Mode**", please go to step 5.

3 If you use "**HID Mode with Passkey**", you will be requested to enter the Passkey (PIN) on the remote host. Please enter the Passkey (PIN) accordingly by scanning the "**Option Code**" (Page 97), and then scan the "**FIN (Finish)**" to end the Passkey entry, then go to step 5.

4 If you scan "**HID Legacy Mode**", the Passkey (PIN) may be requested. Please enter "**00000000**" (default setting). You will see "Keyboard on F(L/A)xxxBT-xxxx" or "Keyboard on PF(L/A)xxxBT-xxxx". Please double click this HID service to establish the connection between scanner and remote host device.

5 The scanner will emit 4 beeps in ascending tone to indicate the connection is established. At the same time, the link indicator of scanner will **blink blue once per 2.5 seconds** to indicate the scanner is in radio-connected state.

Please note that if the scanner is not connected to the host device within 1 minute after scanning the above command, the scanner will enter radio-off status automatically. You can just press the trigger to wake up the scanner to continue the installation.

> The installation procedure may vary depending on different remote host devices, operating systems and the Bluetooth drivers. Please consult your professional IT consultant to obtain necessary support. For more detailed information, please visit CINO website.

12

Using Scanner in SPP Mode

Establish SPP Master Connection

1 Ensure the battery is fully charged. Please go to the folder "**Hardware**" located in Bluetooth Advanced Setting of the remote host device to check its device **MAC address**. Then prepare a 12-character Code 128 barcode of the remote host device MAC address, or follow the step 4 to input MAC address by scanning 12 option codes.

2 Ensure a virtual COM port is available in your remote host for connecting the scanner. If not, please go to the folder "**Local Services**" located in Bluetooth Advanced Setting. Click the "**Add Serial Services**" to add one more Bluetooth COM port.

3 Power on or wake up the scanner by pressing the **Trigger** key within radio coverage if the scanner is power-off, and ensure the status indicator of scanner **blinks red and green blinks alternatively** (in "**Uninstall**" state). If the scanner is not in uninstall state, please scan the "Uninstall" command first, then scan the "SPP Master Mode" command. The status indicator of scanner will turn steady red immediately.

<table>
<tr><td style="text-align:center">‖‖‖‖‖‖‖‖‖‖
Uninstall</td><td style="text-align:center">‖‖‖‖‖‖‖‖‖‖
SPP Master Mode</td></tr>
</table>

4 Scan a 12-character MAC address barcode, or scan 12 option codes and "FIN" command to confirm your inputs. The scanner will emit continuous short clicks and the link indicator of the scanner will **blink blue** quickly during the radio connecting process. If the PIN Code or Passkey is requested, please enter "**00000000**" (default setting).

5 The scanner will emit 4 beeps in ascending tone to indicate the radio is connected. At the same time, the link indicator of scanner will **blink blue once per 2.5 seconds** to indicate the scanner is in radio-connected state.

Please note that if the scanner failed to connect to the host device within 30 seconds, the link indicator will **blink blue 3 times per 2 seconds**. But the scanner is still continuing to discover the host device for another 30 seconds before go off. In the interim, you still can scan "Uninstall" command to revert the scanner to uninstall state. If the scanner entered radio-off status already, you just need to press the trigger to wake up the scanner to continue the installation.

The above procedures are based on popular Windows environment. But the installation procedure may vary depending on different remote host devices, operating systems and the Bluetooth drivers. Please consult your professional IT consultant to obtain necessary support if any problem has been encountered during the installation processes. For more detailed information, please visit CINO website.

cino®

Wireless FuzzyScan Reference Manual

Establish SPP Slave Connection

1 Ensure the battery is fully charged and a virtual COM port is available in your remote host for connecting the scanner. If not, please go to the folder "**Client Applications**" located in Bluetooth Advanced Setting. Click the "**Add COM Port**" to add one more Bluetooth COM port.

2 Power on or wake up the scanner by pressing the **Trigger** key within radio coverage if the scanner is power-off state, and ensure the status indicator of scanner **blinks red and green alternatively** (in "**Uninstall**" state). If the scanner is not in uninstall state, please scan the "Uninstall" command first. Then scan the "SPP Slave Mode" command, and the link indicator of scanner will **blink blue 3 times per 2 seconds** during searching process.

Uninstall   **SPP Slave Mode**

3 You have to execute the Bluetooth Discovery procedure to find all available Bluetooth device list in your remote host. You will see 'F(L/A)xxxBT-xxxx'' or 'PF(L/A)xxxBT-xxxx'' is shown in the list if the scanner is successfully discovered.

4 Double click the "F(L/A)xxxBT-xxxx" or 'PF(L/A)xxxBT-xxxx'' on the discovered Bluetooth devices. If the PIN Code or Passkey is requested for security connection, please enter "**00000000**" (default setting). You will see "Serial Port on F(L/A)xxxBT-xxxx" or 'PF(L/A)xxxBT-xxxx''. Please double click this SPP service to establish the connection between scanner and remote host device.

5 The scanner will emit 4 beeps in ascending tone to indicate the connection is established. At the same time, the link indicator of scanner will **blink blue once per 2.5 seconds** to indicate the scanner is in radio-connected state.

Please note that if the scanner is not connected to the host device within 1 minute after scanning the "**SPP Slave Mode**" command, the scanner will enter radio-off status automatically. You can just press the trigger to wake up the scanner to continue the installation.

The above procedures are based on popular Windows environment. But the installation procedures may vary depending on different remote host devices, operating systems and the Bluetooth software drivers. Please consult your professional IT consultant to obtain necessary support if any problem has been encountered during the installation processes. For more detailed information, please visit CINO website.

Wireless FuzzyScan Reference Manual

Pairing Bluetooth Imager with Dongle

1 Turn on your FuzzyScan Bluetooth imager. Make sure it is in an unpaired state: its status indicator should emit alternating red-green flashes. Otherwise, scan the "Uninstall" command barcode to release any prior pairing.

2 Initiate the dongle-imager pairing process by scanning the dongle's "Quick Pair" barcode label. Your imager will then produce clicking sounds, and its link indicator will flash blue rapidly. During this process, your dongle will continue to emit red and green lights.

3 Upon successful pairing, the scanner will beep 4 times in ascending tone, and its link indicator will flash blue every 2.5 seconds. The dongle's power/pairing indicator will be a steady blue.

> The Quick Pair barcode on your dongle is designed for "Pair Mode", i.e. the dongle can only pair with one imager at a time. The dongle's default host interface setting is USB HID. To change this setting to USB COM, please first install the USB2COM driver on your host device.

Unpairing Bluetooth Imager from Dongle

To unpair the imager from a dongle, scan the "Uninstall" barcode with such imager. If unpairing is successful, the imager will beep 4 times in descending tone. Both the dongle and the imager will also emit red-green flashes to reflect their unpaired state.

Uninstall

Creating a Barcode for PAIR Mode

Under PAIR mode, only one imager can be paired with the smart dongle. The original Quick Pair barcode on the smart dongle is for PAIR mode. To create a back up pairing barcode under this mode, please follow the instructions below.

1 Pair your dongle with an imager using the Quick Pair barcode.

2 Thereafter, scan the "System Information" command barcode. The dongle's MAC addresses will be displayed on your host device.

SYSTEM INFORMATION

③ Use your barcode generator to create a pairing barcode for PAIR mode. The barcode's symbology should be Code 128, and its format ought to be as follows:

<Fnc 3>Pxxxxxx

④ P is the prefix. xxxxxx represents the last 6 characters of the smart dongle's MAC address

For example, if the dongle's MAC address is "00 25 14 11 11 11", the pairing barcode will be: P111111

Locked Pair Mode

When your imager is paired with a smart dongle under PAIR mode, they become "locked" by default, i.e. other imagers will be prevented from pairing with the dongle. To establish an "unlocked" connection, scan the "Unlocked Pair Mode" command before pairing with the dongle. To revert back to the default setting afterwards, scan the "Locked Pair Mode" command.

Locked Pair Mode ◆

Unlocked Pair Mode

Override the locked scanner

To override and replace the imager that is locked to a smart dongle, scan the "Override the locked scanner" command with your new imager. Thereafter, scan the dongle's "Quick Pair" barcode label. The locked Bluetooth pairing will be overridden / removed, and the new imager will be connected instead.

Override the locked scanner

Wireless FuzzyScan Reference Manual

Creating a Barcode for PAIR Mode

Under PICO mode, multiple imagers (up to 7) can be paired with a smart dongle simultaneously. To establish pairings under this mode, you must create a pairing barcode for this purpose with a barcode generator.

➊ Pair your dongle with an imager using the Quick Pair barcode.

➋ Thereafter, scan the "System Information" command barcode. The dongle's MAC addresses will be displayed on your host device.

SYSTEM INFORMATION

➌ Use your barcode generator to create the pairing barcode for PICO mode. The barcode's symbology should be Code 128, and its format ought to be as follows:

<Fnc 3>Mxxxxxx

➍ M is the prefix. xxxxxx represents the last 6 characters of the smart dongle's MAC address.

For example, if the dongle's MAC address is "00 25 14 11 11 11", the pairing barcode will be: M111111

To unpair a scanner under PICO mode, please scan the "Uninstall" barcode.

Enter Bluetooth Discoverable Mode (only available for pocket scanners)

If you use pocket scanner, you can have the scanner entered into Bluetooth discoverable mode for pairing with any remote host easily. When you press and hold the **FN1** for more than 3 seconds, the scanner will enter into preset Bluetooth discoverable mode. You have to carry out the Bluetooth discovery procedure to find the scanner for pairing. The preset Bluetooth profile for discoverable mode is "HID Mode". You can change the Bluetooth profile to "HID Mode with Passkey" or "SPP Slave Mode".

Out-of-range Scanning

When the radio connection is established between scanner and remote host device, the scanner will transmit each scanned data right after scanning the barcode. However, the scanner is preset not to scan any barcode data when it loses the radio connection with the remote host device.

If you enable the out-of-range scanning function, the scanner is able to continue scanning barcode data while it is out of radio coverage. All scanned data will be temporarily stored into the memory buffer until radio link resumed.

<div style="text-align:center">

Enable Out-of-range Scannning   **Disable Out-of-range Scanning ◆**

</div>

In case of the scanner is out of radio coverage, you will hear 4 beeps in descending tone to indicate the radio connection lost. The link indicator of scanner will **blink blue 3 times per 2 seconds**. Once the scanner is back to radio coverage, you will hear 4 beeps in ascending tone to indicate the radio connection rebuilt and the scanner will **blink blue once per 2.5 seconds**. At the same time, all stored scanned data will be transmitted automatically right after the radio link is resumed.

Power Off

By default, the scanner goes off if the scanner is not used during the user-defined time out duration. If you want your scanner powered off immediately, you can scan the "Power Off" command. For pocket scanner user, you also can power off the scanner by long pressing and holding **Right Key** for more than three seconds. If you would like to activate the scanner, please press the trigger key.

<div style="text-align:center">

Power Off

</div>

Batch Scanning Mode (Inventory Mode)

Thanks to the specially designed Batch Scanning function, the scanner is capable of storing the barcode data. It is an ideal cost-saving solution for inventory applications.

Once you scan the ""Enter Batch Scanning" command to activate this function, all scanned barcode data will be stored into the memory storage, and the status indicator of scanner will give **green blink** at regular interval during batch scanning. You can scan and store the barcode data till the memory storage is full. If the storage is full, you will hear 2 long beeps and the status indicator will give 2 red blinks to indicate **out of storage**.

If you use pocket scanner, you can also press and hold the **Function Key 2** for more than 3 seconds to enter Batch Scanning, by which 3 beeps will be heard and the status indicator of the scanner will **blink green** at regular interval during batch scanning.

To exit the batch scanning, please scan the "Exit Batch Scanning" command. If you use pocket scanner, you can also exit the batch scanning by pressing and holding **Function Key 2** for more than 3 seconds.

Enter Batch Scanning   **Exit Batching Scanning**

Adding a Quantity Value to Barcode Data

The scanner supports quantity feature when it enters batch scanning. When you use quantity feature, the quantity information and scanned barcode data will be stored into the memory storage together. You can enter the quantity information from 1 to 9999 by scanning the following quantity commands right after you scanned the barcode data.

Quantity 0

Quantity 3

Quantity 5

Quantity 8

Quantity 1

Quantity 6

Quantity 4

Quantity 9

Quantity 7

Quantity 2

There are three ways to output the stored barcode data and quantity information. The preset output format is to transmit stored data as many times as the quantity indicated.But you still can set the scanner to output stored barcode data together with quantity information in two fields, and a preset delimter" ， " will be output in between. To fulfill different application requirements, both the delimiter and output sequency can be changed as well.

As many times as the quantity indicates ◆

<Quantity><Field Delimiter><Scanned Data>

<Scanned Data><Field Delimiter><Quantity>

How to Transmit Stored Data

The scanner is preset to transmit all the stored data by scanning the "Transmit Stored Data" command. If you use pocket scanner, you can also transmit the stored data by pressing and holding **Left Key** for more than 3 seconds. During the transmission, the scanner will emit continuous short clicks and the link indicator will **blink blue**. Then the scanner will emit two short beeps after data transmission is completed.

Transmit Stored Data

But you are able to transmit the stored data by placing the scanner onto the cradle as well.

Scan Barcode Command ◆

Place Scanner onto the Cradle

Scan command or Place Scanner onto theCradle

How to Delete Scanned Data

The scanner is preset to keep all the stored data until you scan the "Clear All Stored Data" command. But you are still able to change the setting to "Auto Delete Stored Data after Transmission" as well.

Clear All Stored Data

Auto Delete Stored Data after Transmission

Keep Stored Data after Transmission ◆

How to Delete the Last Scanned Data

If you scanned a wrong barcode, the last scanned data can be deleted by scanning the ''Delete Last Scanned Data" command. If you use pocket scanner, you can also delete the last scanned data by short pressing the **FN2**.

Delete Last Scanned Data

Validation Scanning Mode

Validation Scanning function is provided to check whether the scanning barcode matches the registered master data or not. The scanner is capable of storing up to **2K bytes** master data.

You can have your scanner entered or exited the Validation Scanning by scanning the following commands. You will hear 3 short beeps when entering in Validation Scanning. The status indicator of the scanner will blink green once per 2.5 seconds to indicate the scanner is under Validation Scanning. To terminate the validation scanning, please scan the "Exit Validation Scanning" command, the scanner will emit 3 short beeps.

Enter Validation Scanning

Exit Validation Scanning

The Batch Scanning (Inventory Mode) is set as the default Function Mode. Batch Scanning and Validation Scanning can't be used at the same time. If you want to use the Function Key of pocket scanner to carry out Validation Scanning, you have to change the "FN2 Function Mode" default setting.

If you use pocket scanner, you can press and hold the **FN 2** for more than 3 seconds to enter Validation Scanning. The scanner will emit 3 short beeps and the status indicator of the scanner will blink green once per 2.5 seconds to indicate the scanner is under Validation Scanning. To exit Validation Scanning, press and hold the **FN 2** for more than 3 seconds, the scanner will emit 3 short beeps.

Wireless FuzzyScan Reference Manual

Register Master Data

Master Data Registration allows you to register your master data for validating the slave data. You can have the scanner entered or exited "Master Data Registration" by scanning following quick set commands.

Register Master Data

Finish Registering Master Data

If you use pocket scanner, you can also have your scanner entered Master Data Registration by short pressing the FN2. The scanner will emit 2 short beeps and the status indicator will become steady green. Once you complete master data registration, you can have the scanner exited "Master Data Registration" by short pressing FN2

After entering Master Data Registration, you can scan and register single or multiple master data by pressing the Trigger Key. If the master data is registered successfully, the scanner will emit 1 good read short beep.

The default Master Data Registration Setting is preset to" Single Master Data", though you can scan multiple master data continuously, only the last master data will be valid, and the master data registered previous to the last master data will be cleared. The scanner is capable of storing up to 2K byes master data.

All scanned master data will be stored into the memory storage. You can scan and store the barcode data till the memory storage is full. If the storage is full, the scanner will emit 2 long beeps and the status indicator will blink red twice to indicate out of storage. Please note that the registered master data will be eliminated once you power off the scanner

You can clear the master data by scanning following command.

Clear Master Data

After registering master data, you can check registered master data by scanning following command.

Check Master Data

📋 If the scanner is under "Master Data Registration" and put onto cradle for charging, the status indicator will show battery status indication. Once the scanner leaves the cradle, the scanner will resume to previous status, and the status indicator will present correspondent status indication.

📋 **Above function is only available to FuzzyScan Bluetooth Cordless Scanner:**

One of following Bluetooth scanners with proper firmware preload:

A780BT series: Rev. 1.00.01 and above

A680BT series: Rev. 1.00.01 and above

A770BT series: Rev. 2.00.05 and above

A670BT series: Rev. 1.00.02 and above

F780BT and L780BT series: Rev. 4.00.08 and above

F680BT and L680BT series: Rev. 4.00.08 and above

PA670BT series: Rev. 1.00.04 and above

PF680BT and PL680BT series: Rev. 1.00.09 and above

Toggle between Barcode Scanning and On-screen Keyboard Input

You can toggle between use barcode scanning and on-screen keyboard input of the mobile device. To activate the on-screen keyboard input function; you can turn off the radio by scanning "**Switch On-screen Keyboard**" command. If you use pocket scanner, you can turn off the radio to activate the on-screen keyboard input by short pressing the **FN1** Once you finished the keyboard input, pressing the trigger once to turn on the radio, the on-screen keyboard input function will be inactivated.

The scanner is preset to use "General Approach" by controlling the radio to toggle between barcode scanning and on-screen keyboard input of most popular mobile devices. To work with iOS devices, please scan "iOS Ap n-screen keyboard input. If you use pocket scanner, the **FN1** can be set to "iOS Approach" to quickly toggle iOS on-screen keyboard input, and you can also toggle the iOS on-screen keyboard input by short pressing the **FN1.**

General Approach ◆   **iOS Approach**

Switch On-screen Keyboard

Above function is available for FuzzyScan Bluetooth Cordless Scanner:

One of following Bluetooth scanners with proper firmware preload:

λ   Bluetooth Image Scanners

F680BT / F780BT :   Rev. 4.00.05 and above

L680BT / L780BT: Rev. 4.00.05 and above

A670BT :   Rev. 1.00.01 and above

A770BT :   Rev. 1.00.14 and above, Rev. 2.00.02 and above

A780BT / A680BT: Rev. 1.00.01 and above

Presentation Scanning (Gun type only)

The Presentation Scanning is designed for hand-free applications for user's convenience. If the "Presentation Scanning Auto-sense" function is enabled, the scanner is capable of automatically switching to presentation mode as soon as you place it onto the SmartStand or cradle.

Enable Auto-sense   **Disable Auto-sense ◆**

Check Battery Status

You can check battery status of the scanner by short pressing the Left Key or scanning "Check Battery Status" command. Please refer to the "Battery Status Indication" shown on page 1 for details.

Check Battery Status

Available Firmware:
F680BT/F780BT, L680BT/L780BT: 3.01.08 and above; 4.00.05 and above
A670BT: 1.00.01 and above;
A770BT: 1.00.14 and above; 2.00.03 and above
A680BT/A780BT: 1.00.01 and above
PF/PL680BT: 1.00.05 and above; PA670BT: 1.00.01 and above

Battery Status Indication

The following corresponding flashes of the LED indicators present the current battery status of the scanner.

LED Indication	Battery Status
3 green and blue flashes	More than 75%
3 green flashes	More than 50%
3 orange flashes	More than 25%
3 red flashes	Less than 25%

26

Paging Function

The Paging function is helpful for you to locate the paired smart cradle or scanner. If you would like to page the paired smart cradle, you can scan "Paging" command. If you would like to page the paired scanner, you can press the paging/reset button of the smart cradle **no longer** than 3 seconds.
Paging/Reset Button

Paging

CONFIGURING YOUR SCANNER

Configuration Barcode Menu

The FuzzyScan barcode commands are specially designed **Proprietary** bar code labels which allow you to set the FuzzyScan internal programming parameters. There are **System Command**, **Family Code** and **Option Code** for programming purpose.

Each programmable family and bar code command label is listed on the same page with major system commands. The detailed explanations and special programming flowchart are printed on facing or following pages. You can read the explanation and set the FuzzyScan concurrently.

A supplemental bar code command menu incorporates the bar code command labels of System Command and Option Code. As you set the FuzzyScan, open the bar code command menu to find the option code page. You may scan the desired family code and option code to set FuzzyScan. If you want to change the programming family for multiple settings, you need only turn over the programming page to find next desired programming family.

System Command

The System Command is the highest level bar code command which directs FuzzyScan to perform immediate operations, such as entering programming mode (**PROGRAM**), exiting programming mode (**EXIT**), listing system information (**SYSLIST**), recovering to factory preset configurations (**M_DEFAULT**), and so on. Please note that all system commands will take a few seconds to complete the operations. User must wait for the completion beeps before scanning another bar code.

Family Code

The Family Code is scanned to select the user desired programming family. FuzzyScan has already provided more than one hundred programming families to meet any specific requirements.

Option Code

The Option Codes is a set of bar code commands represented by "**0–9**", "**A–F**" and finishing selection (**FIN**). For most setting, you must select at least one option code following the family code selection to set the desired parameter for the selected programming family.

Programming Procedures

As you scan the bar code command to select the desired parameters, information about the final selected parameters represented by the bar code commands are stored in the FuzzyScan's internal Flash Memory ASIC or non-volatile memory. If you turn off the unit, the Flash Memory ASIC or non-volatile memory retains all programming options. You need not re-program the FuzzyScan if you want to keep the existing configurations in the next power on.

The programming procedures of FuzzyScan are designed as simple as possible for ease of setting. Most programming families take the **Single Scan Selection** programming procedure. But several programming families have more complex and flexible programmable options, and you must take **Multiple Scans Selection, Cycling Scan Selection or Dual Level Selection** to complete their programming procedures. Each kind of programming procedure is listed in the following pages for your reference. Please give careful attention to become familiar with each programming procedure.

If the programming family must take multiple scans selection, cycling scan selection, or dual level selection procedures, the family of the programming menu will be marked with the matched representing symbol of **Programming Category** (P.C.) in bold font listed in the following table. You can easily find the bold mark in the programming menu, and refer to their flowcharts for details. Before setting the FuzzyScan, please also refer to the "Beeping Indications" listed in Appendix to understand the details of programming beeping indications. It will be very helpful for you to know the existing status while you are programming the FuzzyScan.

▪ UPC/EAN Security Level
   The scanner offers three levels of decode security for UPC/EAN bar codes:

   Level 0: If you are experiencing misread of poorly-printed or out-of-spec. bar codes, especially in characters 1, 2, 7, and 8 in level 1, please select level 0. Selection of this security level may significantly impair the decoding ability of the scanner.

   Level 1: This is the default setting which allows the scanner to operate fastest, while providing sufficient security in decoding "in-spec" UPC/EAN bar codes.

   Level 2: If you failed to read poorly-printed or out-of-spec. bar codes in level 1, please select level 2. This is the most aggressive setting and may increase the misread.

▪ The **Supplement Scan Voting** is the number of times the same UPC/EAN with 2/5 supplement digits has to be decoded before it is transmitted. It is helpful when decoding a mix of UPC/EAN symbols with and without supplement digits. This function is effective when you select UPC/EAN with only 2 supplement digits, UPC/EAN with only 5 supplement digits or UPC/EAN with 2/5 supplement digits. The default value is Level 3. When you select higher level, it may impact the reading speed on poorly-printed, low contrast or damage barcode labels.

▪ **Intermessage Delay** is a time delay between messages output by FuzzyScan. Increasing this delay will help host applications process the incoming data on time.

▪ **Intercharacter Delay** is a time delay between data characters output by FuzzyScan. This parameter is used to synchronize data communication when : 1) the data transmission speed is too fast, characters may be skipped; 2) multitasking operation system or host computers in a network may slow down the keyboard handling; 3) various notebook or desktop PC systems require different timing parameter settings. Please always add one extra unit as safety margin when adjusting this parameter

▪ **Interfunction Delay** is a time delay between the transmissions of each segment of the message string.

▪ **Intermessage Delay, Intercharacter Delay and Interfunction Delay** are unconfigurable under SPP and HID modes.

▪ **Corresponding Languages:** Please see Appendix below, "Code Page - Table of Corresponding Languages".

▪ **Barcode Encoding Format:** 2D barcodes can be encoded using different code pages. To properly decode the data of a 2D barcode, the scanner must first be set to the

corresponding code page of such data. Select UTF8 if the 2D barcode was encoded in Unicode (UTF-8).

▪ **Keyboard Output:** Different languages use different code pages. For your scanner to properly display the content of a 2D barcode, select the code page that corresponds to the content's language. Please check your system locale setting in Windows and make sure that it also matches this language.

1) Mac Device Output**:** If your host is a Mac device, select "MAC Unicode Output" as the scanner's output setting (the data will be in Unicode). You must also first ensure that your Mac device has the required Unicode Hex Input Setup and is configured for the 16-bit input method. Please see Appendix below, "Code Page - Unicode Hex Input Setup".

2) WIN Notepad Unicode Output: If your host is a Windows device, you can output the data in Unicode format to Notepad. You must first ensure that your Windows device has the required Unicode Hex Input Setup, and is set to the US English input method. Please see Appendix below, "Code Page - Unicode Hex Input Setup".

3) WIN WordPad Unicode Output: If your host is a Windows device, you can output the data in Unicode format to WordPad. You must first ensure that your Windows device is set to the US English input method.

Interfunction Delay	SS **MS**	None ◆ 1-99 (x5) msec. Scan 2 digits from the option code chart in Appendix, then FuzzyScan will terminate this selection automatically.	**FIN** **(2 digits)**

▪ **Intermessage Delay** is a time delay between messages output by FuzzyScan. Increasing this delay will help host applications process the incoming data on time.

▪ **Intercharacter Delay** is a time delay between data characters output by FuzzyScan. These two parameters are used to synchronize data communication when : 1) the data transmission speed is too fast, characters may be skipped; 2) multitasking operation system or host computers in a network may slow down the keyboard handling; 3) various notebook or desktop PC systems require different timing parameter settings. Please always add one extra unit as safety margin when adjusting these two parameters.

▪ **Interfunction Delay** is a time delay between the transmissions of each segment of the message string.

▪ **Intermessage Delay**, **Intercharacter Delay** and **Interfunction Delay** are unconfigurable under SPP and HID modes.

Wireless FuzzyScan Reference Manual

Serial Interface Control

♦ Protocol, ACK/NAK Setting ♦

PROGRAM

F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code
Handshaking Protocol	SS SS SS SS	None (free running mode) ◆ RTS/CTS (hardware handshaking) ACK/NAK (software handshaking) Xon/Xoff (software handshaking)	0 1 2 3
NAK Retry Count	SS SS	3 times ◆ 0~255 times	**FIN** **(3 digits)**
ACK Indication	SS SS SS SS	Disable ACK Time-out Indication Enable ACK Time-out Indication ◆ Disable ACK Indication ◆ Enable ACK Indication	0 1 2 3

▪ USB COM doesn't support RTS/CTS handshaking protocol.

▪ When the **ACK/NAK Software Handshaking** option is selected, the FuzzyScan waits for an **ACK** (acknowledge) or **NAK** (not acknowledge) from the host computer after each data transmission. If the NAK is received, FuzzyScan will re-send the data until receiving ACK.

  ACK/NAK handshaking protocol is workable under following conditions:

  1) Pair mode by using RS232 or USB COM interface.

  2) SPP master or slave mode.

▪ **NAK Retry Count**

  After transmitting data, the scanner expects a NAK response from the host up to the preset "Serial Response Time-out". If the scanner doesn't get a response, the scanner will issue an error indication and discard the data. When a NAK is received, the scanner transmits the same data again and waits for either an ACK or NAK. The scanner issues an error indication and discards the data under following two conditions:

  1) After preset NAK retry counts is received within the preset serial response time-out.

  2) If the preset time-out is up but the preset NAK retry counts haven't come to the end.

  The default retry counts are three times. If you program "0 time", the scanner won't resend the data to the host when the scanner receives a NAK. The scanner will discard the data. If you program "255 times", the scanner can receive unlimited NAKs from the host within the pre-set serial response time-out.

  This function is not available for batch mode. When you enable this function in on-line mode, the out-of-range function will be disable automatically.

▪ **ACK Indication:**

  Disable: There's neither LED nor beeping indication for this setting.

  Enable: There's a specific LED and beeping indication for this setting.

Wireless FuzzyScan Reference Manual

75

Serial Interface Control

♦Time Out Setting, Baud Rate, Data Frame ♦

PROGRAM

F_DEFAULT

Family Code Selection	P.C	Parameter Selection		Option Code	
Serial Response Time-out	SS	None	3 seconds	0	6
	SS	200 mseconds	4 seconds	1	7
	SS	500 mseconds ◆	5 seconds	2	8
	SS	800 mseconds	8 seconds	3	9
	SS	1 second	10 seconds	4	A
	SS	2 seconds	15 seconds	5	B
Baud Rate (BPS)	SS	38.4K BPS	2400 BPS	0	4
	SS	19.2K BPS	1200 BPS	1	5
	SS	9600 BPS ◆	57.6K BPS	2	8
	SS	4800 BPS	115.2K BPS	3	9
Data Frame	SS	8, None, 1 ◆	7, Space, 1	0	8
	SS	8, Odd, 1	7, Mark, 1	1	9
	SS	8, Even, 1	7, None, 2	2	A
	SS	8, Space, 1	7, Odd, 2	3	B
	SS	8, Mark, 1	7, Even, 2	4	C
	SS	8, None, 2	7, Space, 2	5	D
	SS	7, Odd, 1	7, Mark, 2	6	E
	SS	7, Even, 1		7	

When the **RTS/CTS Hardware Handshaking** option is selected, the **RTS** (request to send) and **CTS** (clear to send) signals will be issued before normal data communication. This option is very helpful to ensure the reliability of data communication.

▪ The **Serial Response Time-out** is a pre-defined delay time for FuzzyScan to wait for handshaking, acknowledgment or non-acknowledgment from the host computer.

Operation Control
(A Series & PA Series)

PROGRAM

♦ **Batch Reading** ♦

F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code
Batch Reading	SS	None ◆ Batch Reading rule input (01-16 rules)	[FIN] [Rules] [FIN]

▪ **Batch Reading**: When this function is enabled, you can scan multiple barcodes one by one continuously upon one trigger event. The scanner reports a good read beep and indication only if all bar codes set by the "Batch Reading Rule" are read. Otherwise, the scanner reports an error beep and indication. The scanned data will be transmitted according to the preset sequence which is defined in "Batch Reading Rule" regardless the scanned order of those barcodes.

  ■ Batch Reading function is only available **Trigger Mode**.
  ■ Batch Reading is not available when **Multiple Read Mode** or **Center Alignment** is turned on.

▪ **Batch Reading Rule**:

  - To set the Batch Reading rule
  1.Scan the **PROGRAM** symbol.
  2.Scan the **Batch Reading** symbol (Family Code).
  3.Use the **Option Code** to define the preset Batch Reading rule.
  4.Scan the **FIN** symbol.
  5.Scan the **END** symbol to save your Batch Reading rule.
  Note: Scan the **ABORT and END** symbol to exit without saving any Batch Reading rule setting.

  - When you scan "None", the preset Batch Reading Rule will be cancelled.

  - Batch Reading Rule Syntax:
  [n] [Element 1] FF [Element 2] FF [Element 3] FF …[Element n] FF
  Where **n** is the number of elements in the overall rule. The number of elements is up to 16.**FF** indicates the end of one element.

  - Element structure:
  [Cino ID Hex value] [Code length] [Character match(es)]
  Where:
  ● **[Cino ID Hex value]**
    Length: 2 byte
    Please find Cino ID hex value from **Symbology ID Table** in appendix. Locate the Hex value for the symbology and scan the 2 digit hex values from the **Option Code**.
    Note: 99 is the universal number, indicating all symbologies.

Wireless FuzzyScan Reference Manual

- **[Code length]**

  Length: 4 byte

  Specify what length of data output will be acceptable for this symbology. When you calculate the length, you must consider the whole data string which includes the programmed Preamble, Postamble, Scanned Data Length, Prefix/Suffix Symbol ID or AIM ID. Scan the four digit data length from the **Option Code**.

  Note: 40 characters is entered as 0040; 9999 is a universal number, indicating all lengths.

- **[Character match]**

  Length: 2-8 byte

  You can refer to **HEX/ASCII Reference Table** to find the Hex value that represents the character(s) you want to match. Use the **Option Code** to scan the alphanumeric combination that represents the ASCII characters. You can match up to 4 characters which are counted from the start character of the whole **Data String**.

  Note: When setting the matched character(s), you must match the content of the whole Data String, including the programmed Preamble, Postamble, Scanned Data Length, Prefix/Suffi Symbol ID OR AIM ID if you had defined. **FF** is the universal character, indicating all characters.

- **Batch Reading rule example**

  In this example, you are scanning Code 39, Code 128, and Code 93 bar codes, but you would like to output the data in following sequence:

  Code 128 - Code 39 - Code 93

B-CODE39

A-CODE128

C-CODE93

You would set up the Batch Reading rule with the following command line:

[PROGRAM] [Batch Reading] [0301999941FF07999942FF09999943FF] [FIN] [END]

The breakdown of the command line is shown below:

03	The number of elements in the overall rule
01	Code identifier of Code 128
9999	Code length that must match for Code 128, 9999 = all lengths
41	Start character match for Code 128, 41h = "A"
FF	End of first code
07	Code identifier of Code 39
9999	Code length that must match for Code 39, 9999 = all lengths
42	Start character that must match for Code 39, 42h = "B"
FF	End of second code
09	Code identifier of Code 93
9999	Code length that must match for Code 93, 9999 = all lengths
43	Start character match for Code 93, 43h = "C"
FF	End of third code

To program the previous example using specific lengths, you would have to count the programmed Preamble, Postamble, Scanned Data Length, Prefix/Suffix Symbol ID OR AIM ID if you had defined as part of the length. If you enable the Suffix Symbol ID of symbology, you would add one character to the previous example's length.

You would set up the Batch Reading rule with the following command line:

[PROGRAM] [Batch Reading] [0301001041FF070009FF09000943FF] [FIN] [END]

The breakdown of the command line is shown below:

03	The number of elements in the overall rule
01	Code identifier of Code 128
0010	Code length that must match for Code 128
	A-CODE128 sample length (9) plus Suffix Symbol ID (1) = 10
41	Start character match for Code 128, 41h = "A"
FF	End of first code
07	Code identifier of Code 39
0009	Code length that must match for Code 39
	B-CODE39 sample length (8) plus Suffix Symbol ID (1) = 9
FF	Universal matched character, indicating all character
	Also indicate end of second code
09	Code identifier of Code 93
0009	Code length that must match for Code 93
	C-CODE93 sample length (8) plus Suffix Symbol ID (1) = 9
43	Start character match for Code 93, 43h = "C"
FF	End of third code

Note: If the [Character match(es)] is set to "FF", the following "FF" which indicated the end of the code was not need to set.

- Structure of **Data String**

STX (RS232/USB COM interface)	Preamble	Scanned Data Length	Prefix Symbol ID Or Prefix AIM Symbol ID	Scanned Data modified by DataWizard	Suffix Symbol ID Or Suffix AIM Symbol ID	Postamble	ETX (RS232/USB COM interface)
1 character	1-15 characters	2-4 digits	1 or 3 characters	Variable length	1 or 3 characters	1-15 characters	1 character

Low Power Standby mode Link Indication	SS SS SS	Turn off immediately Last for 1 minute ◆ Keep on till power-off	0 1 2

- The **Light Source On Time** is a pre-defined light source time out counter for Alternative Mode, Presentation Mode and Level Mode. The scanner keeps the light source on till the pre-defined light source on time is up. You can adjust this parameter to meet your own application requirement.

- The Pesentation Mode is referred to as "hands free" mode. The hands free mode will be automatically changed to manual trigger mode when you press the trigger. You can remain the scanner in manual trigger mode by setting the Hands Free Time-Out. Once the time-out duration is up (if there's no any trigger operation), the imager will revert to the original hands free mode.

Wireless FuzzyScan Reference Manual

92

- The Time Delay to Low Power Standby Mode sets the time for scanner to enter low power trigger mode after any scanning activity.
- Use Good Read Duration (Good Read Beep and Vibration Duration) to define beeps and vibration according to operator preference and work environment.

‖‖‖‖‖‖‖‖‖
F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code
Scan Rate Control ‖‖‖‖‖‖‖‖‖	SS SS	Dynamic ◆ Fixed	0 1

- **Scan Rate Control**: The scanner will have better motion tolerance when you select "Fixed" scan rate. It's suitable for application which needs higher motion tolerance on the move. But this may impact to the reading distance.

PROGRAM

Operation Control

(A, PA Series)

♦ **Motion Control,** ♦

F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code
Scene Mode	SS	Scene 1 ◆	0
	SS	Scene 2	1
	SS	Scene 3	2
	SS	Scene 4	3
	SS	Scene 5	4
	SS	Scene 6	5
	SS	Scene 7	6

▪ Scene Mode optimizes scanners' motion tolerance, scanning speed and scanning sensitivity in different scanning environment.

The default setting is Scene 1, which optimizes scanners' motion tolerance, scanning speed and scanning sensitively in the most working environment.

Scene 2: When scanning high-density barcode, you can set the scanner to "Scene 2" to optimize scanners' motion tolerance, scanning speed and scanning sensitively.

Scene 3: Scene 3 is mainly for the common retail application. When scanning the common retail barcode, you can set the scanner to "Scene 3" to optimize scanners' motion tolerance, scanning speed and scanning sensitively.

Scene 4: Scene 4 is mainly for the common retail application. It optimized scanner's sensitivity and scanning speed when scanning the common retail barcode. Moreover, it provides a fine reading performance when scanning barcode on screen of mobile devices, especially the large screen barcode and the screen barcode with lower screen brightness.

Scene 5: Scene 5 is mainly for a specific application. It optimized scanners' motion tolerance, scanning speed and scanning sensitively when scanning the low PCS (print contrast) barcode on circuit board.

Scene 6: Scene 6 is mainly for a specific application. It optimized scanners' motion tolerance, scanning speed and scanning sensitively when scanning barcode on circuit board with the sufficient ambient light.

Scene 7: Scene 7 is mainly for a specific application. It optimized scanners' motion tolerance, scanning speed and scanning sensitively scanning barcode on screen of mobile device.

◆ **Smart stand Power Off Timeout, Laser Aiming Control, LED Illumination Control** ◆

PROGRAM

F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code
SmartStand Power Off Timeout	SS SS SS	3 mins ◆ 5 mins 10 mins Only available for FuzzyScan L series scanners.	0 1 2
Laser Aiming Control	SS SS	Disable Enable ◆	0 1
LED Illumination Control	SS SS	Always on Intelligent Mode ◆	0 1
LED Illumination Delay	SS SS SS SS SS	100 ms 150 ms ◆ 200 ms 250 ms 300 ms	0 1 2 3 4

▪ **The SmartStand Power Off Timeout** is a pre-defined duration for scanner's light source on time when the scanner is placed on SmartStand. While the scanner is placed on SmartStand, the scanner will be switched from hand-held scanning to presentation scanning and the light source will be forced on automatically. The light source will be off when the pre-defined duration is up.

▪ **Laser Aiming Control**: You can disable or enable laser aiming line when you scan **PDF barcode.**

▪ **LED Illumination Control:** When you enable "always on", the LED illumination will be always on when you press the trigger. When you enable "intelligent mode", the scanner will emit the laser aiming line first, the LED illumination will be turned on after the preset LED illumination delay. Intelligent mode is recommended to be used in regular ambient light environment.

	SS	800 ms	3 secs.	2	6
	SS	1 sec	4 secs.	3	7
Decode Aiming Control	SS	Disable in Hand-Held mode		0	
	SS	Enable in Hand-Held mode ◆		1	
	SS	Disable in Hand-Free mode		2	
	SS	Enable in Hand-Free mode ◆		3	

- The **Illumination Control** is only available for hand-held mode.
- **Presentation Background Lighting Control:** You can enable or disable presentation background lighting of the scanner according to the ambient light condition in presentation mode. When the ambient light is dim or dark, you can enable this function to turn on the scanner's LED illumination at a dim level. This is helpful for scanner to detect the motion of scene.
- The **Aiming Control** is only available for trigger mode. In Intelligent Aiming, the aiming light is turned on when the scanner is lifted. A trigger pull activates decoding process. After 2 seconds of inactivity, the aiming light will be shut off. Delay Aiming Control allows a delay time for the operator to aim the scanner before the image is taken. During the delay time, the aiming light will be on, but the LED illumination won't be turned on until the delay time is up.
- The **Delay Aiming Time-out Control** is only available for trigger mode. You can use Delay Aiming Time-out Control to set the delay time.

- **DataWizard** is the most powerful, Artificial-Intelligence based data editing expert system provided specially for the FuzzyScan family bar code readers. Through DataWizard, you can process the scanned data prior the transmissions in many ways as: **Insert Delete**, **Match**, **Verify**, **Replace**, **Reorganize**, and **Repeat Transmission**. It will help you to arrange the transmission of scanned data to any specific format without software modification.

- Due to the resources used by this system, **Full-feature DataWizard** is only supported by **PowerTool**. Through the PowerTool, all settings and configurations can be done on-screen, under Windows 95/98/NT/2000/XP environment.

- A **Condensed Version DataWizard** is provided by each FuzzyScan series. Through this menu, the condensed DataWizard can be utilized via bar code menu readings with ease.

- Please note that all "**Character**" input should be referred to the **ASCII/HEX Table** listed in Appendix to find matched HEX value.

- If you have any problem to use DataWizard, please refer to following pages for details and consult your local FuzzyScan vendor or our web site for any assistance.

Wireless FuzzyScan Reference Manual

Condensed DataWizard

♦ Data Formatter Setting ♦

PROGRAM

F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code	2nd Option Code
Formatter Control	SS MS MS	Disable ◆ Select one bar code symbology Select all bar code symbologies	FIN (2 digits) 00	automatic termination automatic termination
1st Insertion	SS DS	Disable ◆ Enable 2-digits identified position; max. 3 insertion characters	FIN (2 digits) position	[1-3 characters], [FIN]
2nd Insertion	SS DS	Disable ◆ Enable 2-digits identified position; max. 3 insertion characters	FIN (2 digits) position	[1-3 characters], [FIN]
3rd Insertion	SS DS	Disable ◆ Enable 2-digits identified position; max. 3 insertion characters	FIN (2 digits) position	[1-3 characters], [FIN]
4th Insertion	SS DS	Disable ◆ Enable 2-digits identified position; max. 3 insertion characters	FIN (2 digits) position	[1-3 characters], [FIN]

- The **Data Formatter** is used to edit the scanned raw data prior to transmitting the data to the host computers or terminals. It allows you to select desired bar code symbologies for formatter control, and provides **Multiple Position Insertion** and **Multiple Character Insertion** (max three characters) in the identified position.

- While the Data Formatter is enabled, it arranges only scanned data without **Preamble**, **Postamble**, **STX**, **ETX**, **Data Length**, **Prefix/Suffix Symbolology ID** or **Record Suffix**. All of the above programmable parameters perform the same function depending on your setting.

- Regarding the "**Bar Code Selection**" and "**Position Calculation**" of data formatter, please refer to page 60 for details.

- Please note that all "**Character**" input should be referred to the **ASCII/HEX Table** listed in Appendix to find matched HEX value.

Condensed DataWizard

♦ **Data Verifier Setting** ♦

PROGRAM

F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code	2nd Option Code
Verifier Control	SS MS MS	Disable ◆ Select one bar code symbology Select all bar code symbologies	FIN (2 digits) 00	automatic termination automatic termination
Identified Data Length	SS MS	Disable ◆ Enable Determine the identified data length for verification.	FIN (2 digits)	
1st Identified Character	SS DS	Disable ◆ Enable 2-digits checking position; 1 identified character	FIN (2 digits) position	[00-7F]
2nd Identified Character	SS DS	Disable ◆ Enable 2-digits checking position; 1 identified character	FIN (2 digits) position	[00-7F]
3rd Identified Character	SS DS	Disable ◆ Enable 2-digits checking position; 1 identified character	FIN (2 digits) position	[00-7F]

- The **Data Verifier** is used to provide advanced verification for error-free scanning and to work as an **Embedded Data Transmitting Filter**.
- All data must conform to the **Identified Bar Code Symbologies**, **Identified Data Length**, and one to three **Identified Characters** in the checking position. Otherwise, the FuzzyScan will not transmit the data to the host computers or terminals, but will instead issue **3 long beeps** for verification error and **skip** the scanned data.
- The Data Verifier checks only scanned data without **Preamble**, **Postamble**, **STX**, **ETX**, **Data Length**, **Prefix/Suffix Symbology ID** or **Record Suffix**.
- Regarding the "**Bar Code Selection**" and "**Position Calculation**" of **Data Verifier**, please refer to page 60 for details.
- Please note that all "**Character**" input should be referred to the **ASCII/HEX Table** listed in Appendix to find matched HEX value.

♦ **Data Organizer Setting** ♦

PROGRAM

F_DEFAULT

Family Code Selection	P.C	Parameter Selection	Option Code	2nd Option Code
Organizer Control	SS **MS** **MS**	Disable ◆ Select one bar code symbology Select all bar code symbologies	**FIN** **(2 digits)** **00**	automatic termination automatic termination
1st Organization	SS **DS**	Disable ◆ Enable	**FIN** **(2 digits)**	0 (Forward) ◆ 1 (Backward)
		2-digits identified position; Forward/backward data transmission setting	position direction	
2nd Organization	SS **DS**	Disable ◆ Enable	**FIN** **(2 digits)**	0 (Forward) ◆ 1 (Backward)
		2-digits identified position; Forward/backward data transmission setting	position direction	
Include/Exclude Control	SS **DS**	Transmitted data excluded the data of identified position ◆ Transmitted data included the data of identified position	0 1	

▪ The **Data Organizer** is used to edit the scanned raw data prior to transmitting the data to the host computers or terminals. It allows you to select desired bar code symbologies for organizer control, and provides maximum two identified positions to send the data **forward** or **backward**. It also allows you to control the transmitted data **including** or **excluding** the data of identification position. Please refer to the application example listed in page 60 for details.

▪ While the Data Organizer is enabled, it arranges only scanned data without **Preamble**, **Postamble**, **STX**, **ETX**, **Data Length**, **Prefix/Suffix Symbology ID** or **Record Suffix**.

▪ Regarding the "**Bar Code Selection**" and "**Position Calculation**" of Data Organizer, please refer to page 60 for details.

▪ Please note that all "**Character**" input should be referred to the **ASCII/HEX Table**.

114

Application Example

If your bar code label is a 16-digit Interleaved 2 of 5 which includes the information of 6-digit date code, 6-digit serial number and 4-digit unit price, you want the FuzzyScan do the following for you without software modification:

- Apply only Interleaved 2 of 5 to the condensed DataWizard.
- Check bar code is actually with 16-digit length.
- Allow bar code output whose date code is leading with "9".
- Three outputs with "TAB" suffix.
- The date code output should skip "9" and replaced it by "A".
- The serial number output should be led with "SN".
- The unit price output should be skipped the first 2 digits.
- Test Bar Code : <u>9 8 1 0 2 5</u> <u>1 2 3 4 5 6</u> <u>9 8 7 6</u>

Actual Output : A81025[TAB]SN123456[TAB]76[TAB]

Programming Procedure

[Data Verifier]

- Scan "Program" to enter the programming mode.
- Scan "Verifier Control" and set bar code symbology to "**48**" (Interleaved 2 of 5).
- Scan "Identified Data Length" and set the length to "**16**".
- Scan "1st Identified Character" and set the identified position to "**00**", then set the identified character to "**39**" (Hex Code of 9).

[Data Formatter]

- Scan "Formatter Control" and set bar code symbology to "**48**".
- Scan 1st Insertion" and set the identified position to "**06**", then inserted characters to "**09**" (Hex Code of TAB), "**53**" (Hex Code of S), "**4E**" (Hex Code of N).
- Scan "2nd Insertion" and set the identified position to "**12**", then inserted character to "**09**". In the final, you must scan "**FIN**" (Finish) code to terminate this selection.
- Scan "3rd Insertion" and set the identified position to "**16**", then inserted character to "**09**". In the final, you must scan "**FIN**" (Finish) code to terminate this selection.

Wireless FuzzyScan Reference Manual

[Data Replacer]

- Scan "Replacer Control" and set bar code symbology to "**48**".

- Scan "1st Replacement" and set the identified position to "**00**", then replaced character to "**41**" (Hex Code of A).

[Data Organizer]

- Scan "Organizer Control" and set bar code symbology to "**48**".

- Scan "1st Organization" and set the identified position to "**16**", then set the data transmission to "**0**" (forward).

- Scan "2nd Organization" and set the identified position to "**17**", then set the data transmission to "**1**" (backward).

- Scan "**END**" (Exit) to terminate the programming.

[Important Notice]

Please note that Condensed DataWizard will follow the preset working flow as below:

Verifier ▸ Formatter ▸ Replacer ▸ Organizer

So when you set the identified position in Data Organizer, you must consider the inserted data which you already set via Data Formatter.

15	SI	0FH	F6	Ctrl + O	31	US	1FH	RIGHT (Edit)	*see below note

To emulate the keyboard function key input for user definable parameters, user must configure actual content using the **Reserved ASCII 0 – 31** characters, and also **Enable** the "Function Key Emulation". Otherwise, the Ctrl output will be done by the scanner. Please refer to the above Keyboard Function Code Table which is for IBM PC/XT/AT, PS/2, PS/VP, COMPAQ PC, HP Vectra PC, Notebook PC, APPLE and PowerMac, and WYSE PC Enhanced or fully compatible machines.

The last character in the Ctrl Output column is varied for different countries.

Code Page – Unicode Hex Input Setup

1. <u>Windows</u> **- Setting up the Windows Registry**

   Step 1: Open the Registry Editor. You can do so by typing "regedit" in the "Search Windows" function or in Command Prompt.

   Step 2: Go to HKEY_CURRENT_USER\Control Panel\Input Method
   Step 3: Right-click on mouse or press shift + F10 (on keyboard) to add a new String Value (of type "REG_SZ").
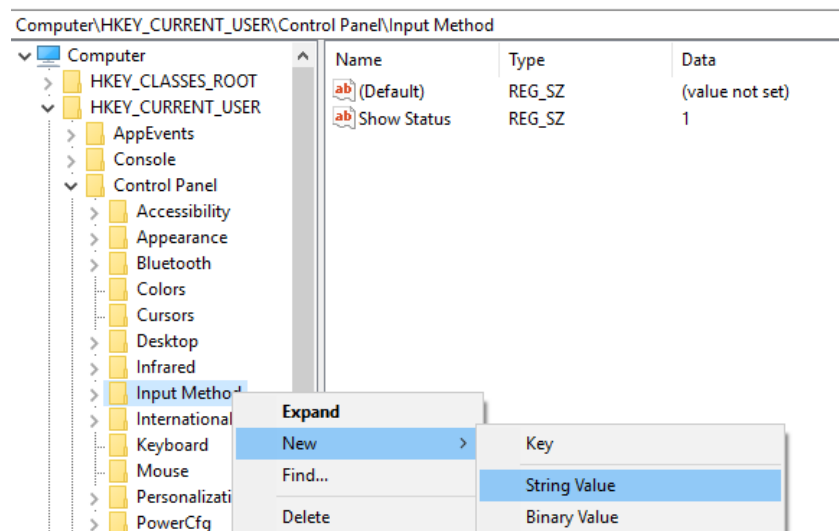

Step 4: Name the new String value as "EnableHexNumpad" and set its Value data to "1".
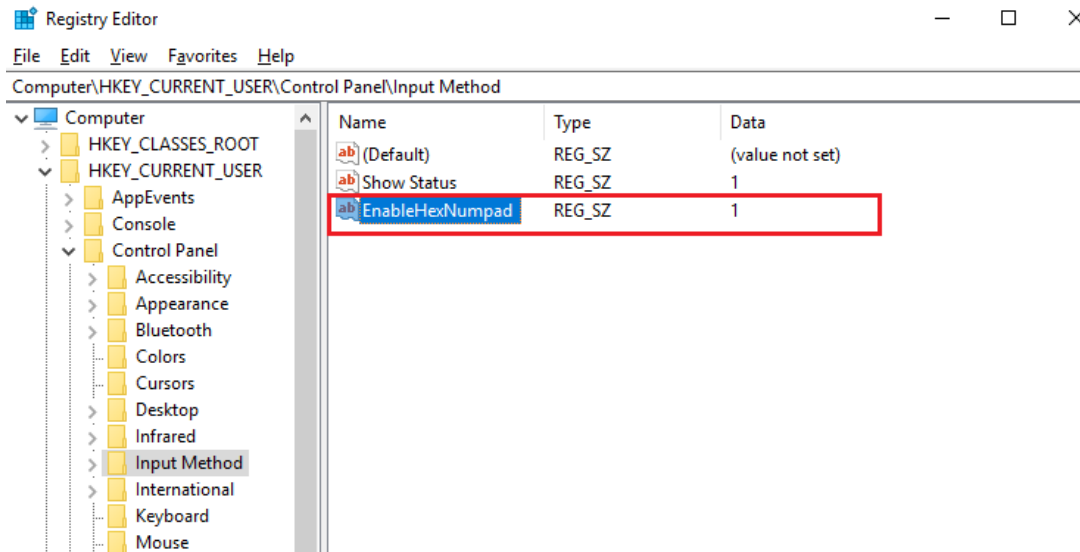

Step 5: Reboot the computer.

2. <u>MAC</u> **- Adding Unicode Hex Input in menu bar**

Step 1: Go to the Apple Menu -> System Preferences -> Keyboard

Step 2: On the Keyboard tab, click on "Input Sources" and check the "Show Input menu in menu bar" box.
Step 3: Click the "+" button to add an input source.

Step 4: Scroll to and select "Others". Click on "Unicode Hex Input" (you can also use the Search function to find it). When done, click on the "Add" button.
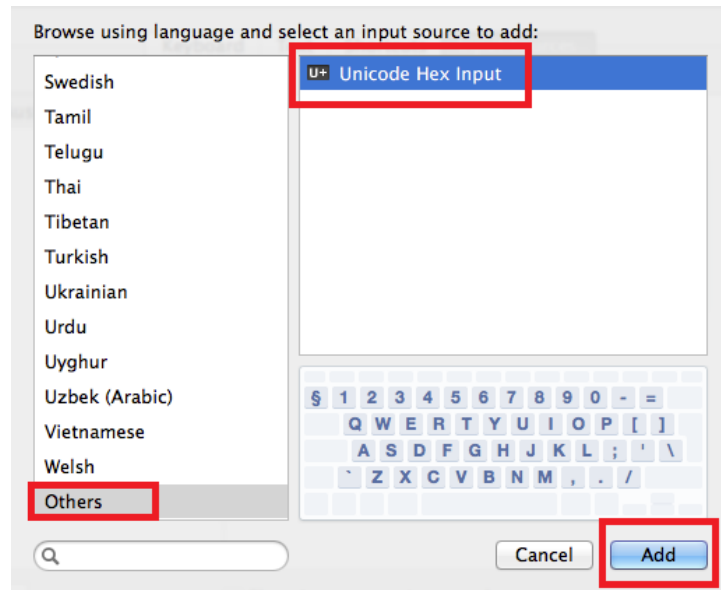

Step 5: Close the Keyboard Preferences menu.
Step 6: Change the input selection to Unicode Hex Input in menu bar.
